

# LOGISTICS: SOLUTION FOR DELIVERY SERVICES

A Wialon-based solution helps arrange shipping operations, optimize transportation processes, and reduce costs.

In the web version of Logistics, dispatchers can effectively control the delivery of goods. A mobile app facilitates the work of couriers and other field workers.

## Web app for dispatchers

### Orders

Create orders in the app, import them from files or via API.

### Planning routes

Choose vehicles and create routes taking into account dozens of different parameters and delivery specifics.

### Route control

Use the map to monitor courier's movements along routes. Keep in touch with the driver by phone or via chat.

### Client notifications

Send notifications to clients about the order status.

### Reports and routes

Use automatically created routes and reports on orders.

## Mobile app for couriers

### Detailed information on orders

Use detailed information on every order: address, arrival time, goods volume, weight, cost, etc.

### A chat for communication with dispatchers

Send photos, inform dispatchers if problems arise.

### The order status and calling a client

Confirm/reject orders. The call button allows you to contact clients immediately.

### Courier notifications

Stay informed and be aware of any changes and force majeure.

### Routes

Check previously created routes at any time.

# WHY LOGISTICS?

- A single service for dispatchers and field workers
- Reduced delivery time and fewer expenses
- API for integration with other systems
- Automated order distribution and route creation
- Effortless delivery route planning
- Effective vehicle distribution
